

Niara Description

In February 2023 Niara was seen as approx. 3.5-week-old puppy in a remote village called Epi, which is in northern Democratic Republic of Congo. GPS coordinates of Epi are: 4.013, 26.679

3 weeks later the litter was visited again. At 6 weeks old Niara was showing nice movement and balance.

A little over a year later Niara now has a red coat, which carries a slight shading on her head and shoulders. She carries a small white blaze on her chest, very small white socks on her paws and a white tip on her tail. Her coat is of average length on her body, with a bit more length around the withers and her ears.

She shows wrinkle, has dark almond shaped eyes with dark eyeliner, a black nose, and her head and muzzle are good proportions. When Niara focuses her attention her ears are hooded. When she is at rest her ears are more relaxed and a little wide set.

Niara carries her tail as a teacup curl over her back. She has a nice length of leg, and her feet are small and compact. Overall, Niara presents an effortless gait with a level top line on the move.

Niara is very independent, friendly, and she exhibits typical Basenji personality traits.
